Anonymice

Protector of Privacy, Guardian of the Small Folk

Zero-Trust Intelligent PII Anonymization & Reversible Redaction for LLM Workflows.

THE PROBLEM

Unintentional Data Leaks to Cloud LLMs

Employees routinely paste sensitive documents into AI prompts.

Exposed Identity Records

Unstructured text exposes names, emails, and credentials.

Compliance Penalties

GDPR and HIPAA strictly penalize unmasked cloud transfers.

THE SOLUTION

Zero-Trust Intelligent Anonymization

Anonymice

Contextual Redaction

Instant entity detection for sensitive personal data.

Reversible Mapping

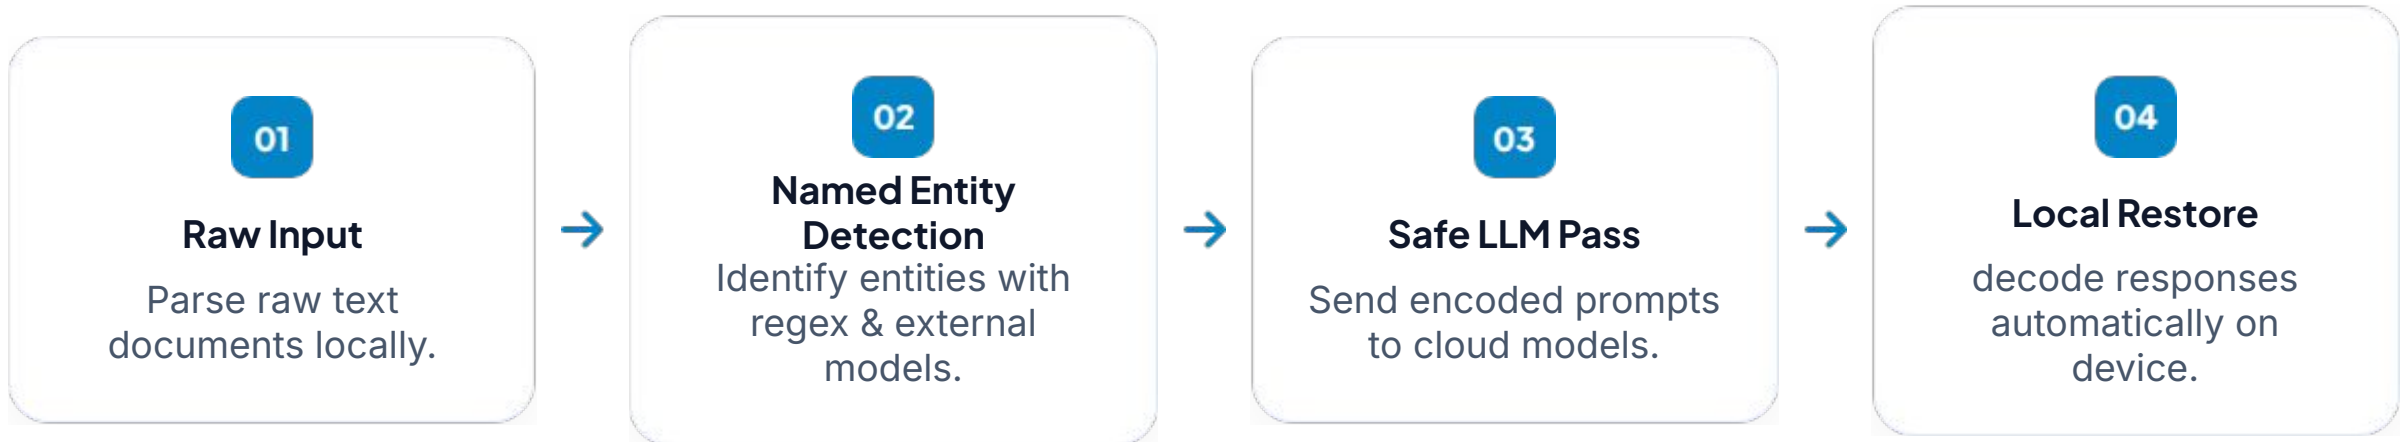

Secure cryptographic key mapping for output restoration.

Local Execution

Zero external server calls or cloud dependencies.

🔒 PII Anonymization

OBSERVABILITY

📊 Logs

🔍 PII Activity

PII Anonymization

Detect PII with rule-based and model-based stages, replace it with reversible tokens on the way to the provider, and restore it on the way back.

Vault

Configuration

Draft a short reply to Anna Meier confirming we received her payment from CH93 0076 2011 6238 5295 7, and copy her at anna.meier@example.ch.

Model openrouter-free

Path

Through the proxy

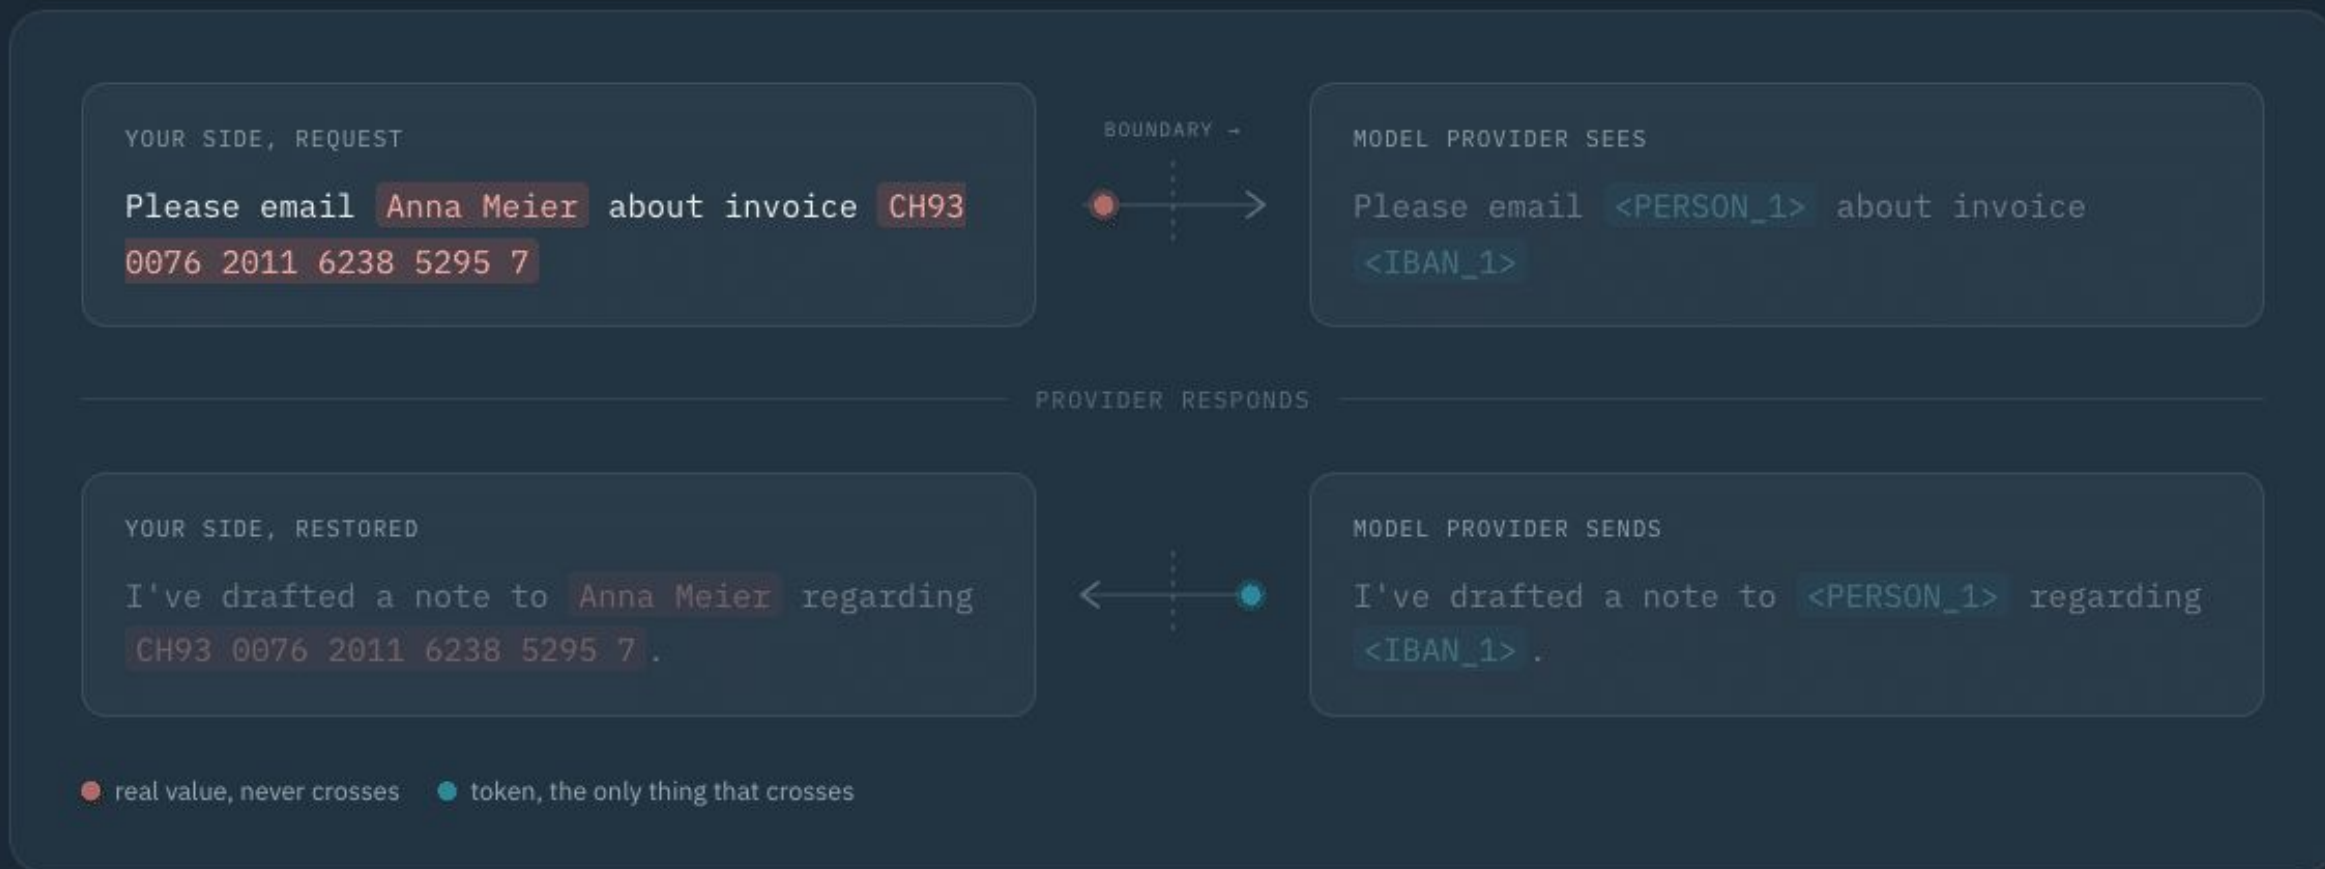

Send it through

The prompt goes to /v1/chat/completions untouched and the guardrail does the work, which is what any client pointed at the proxy gets. Tokens are ordinal, and the mapping lives only for this request.

Send a prompt to watch it get encoded, cross the boundary, come back, and get decoded.

Watch a value cross the boundary

This is an illustration of the mechanism, not a capture of a running interface. A real value leaves your side as a token. It only becomes readable again on your side.

Same mechanism at the browser: a highlighted page value is tokenized the instant it's copied, and restored only on paste into a destination you've marked trusted.

How Anonymice Secures Your Data Pipeline

piiranhha 42.9% (local)

presidio (de) 86.2%

privacy-filter 86.8% (more GPU)

privacy-filter + presidio 94.7%

all three (Anonymice Ensemble) 97.9%

KEY TAKEAWAY

97.9%

Combined Multi-Detector Recall

Single detectors leave critical privacy gaps.
Combining models achieves near-total PERSON
entity capture across unstructured text.
